

# IN2 search interfaces development Ltd

we make your media content accessible

## Experience image and video content

\_Beyond the state of the art tools for search, active exploration, accessible navigation and efficient presentation of media assets

\_Systems and tools that support annotating, capturing and describing non-structured visual content, as well indexing and search of rich media

\_Tools to detect shot boundaries, summarise videos, create video mosaics, extract representative key-frames and describe camera motion in video assets that enable non-linear video browsing and accessible navigation

\_Solutions and consulting services for the broadcasting industry, content owners and multimedia libraries, image agencies and multimedia information providers

\_Valuable enhancements of your existing media data management and search functionality through accessible information processing

\_Services to extract automatically metadata, add captioning, attach keywords and annotations to visual assets for making your image and video content accessible

## Accessible and advanced interfaces

\_Award winning content-based visual search interfaces for images and videos for millions of assets

\_An advanced graphical user interface where you can sketch the image you are looking for and search for it

\_Spider-based semantic interfaces for content collections

\_Timelines and temporal based interfaces

\_Map-based interfaces for geographic/location data

\_Accessible presentation interfaces that fit to your workflow and interaction requirements
